

## Bluetooth™ I/O

# Top Reasons to go WIRELESS

### Wireless Bluetooth

It brings Freedom to move around

A Hands free Deal, with User Friendly Technology

**Dynamic**

**Reliable**

**Fast**

**Inexpensive**

This wireless technology can be used as an alternative transmission medium, because electromagnetic waves are not subject to wear and are therefore particularly suitable for highly dynamic applications. In addition, empty space as a transmission medium is available everywhere, allowing fast, easy and inexpensive installation.

With "Wireless multiplexers", wireless transmission of 16 digital and 2 analog signals bidirectional between two stations can be expected over distances of several hundred meters with no direct line-of-sight requirements. This Bluetooth™ IO solution was developed specially for industrial automation.

It is sturdy and reliable, delivers fast, deterministic data transmission, and is extremely simple to handle. The integrated adaptive frequency hopping procedure avoids interference of any WLAN networks.
